

DIGITAL SECURITY FOR SENIOR CITIZENS

Newsletter: June 2022

Digital Security Board Game Update

Co-funded by the
Erasmus+ Programme
of the European Union

The conceptualisation of the DiSC Digital Security Board Game is complete and Innovation Hive have defined the theme, mechanics, and overall concept of your board game. The initial prototype was presented at the Transnational Project Meeting in Valencia on the 8th June.

The game design includes a document outlining the rules, gameplay flow, player interactions, and visual elements as well as single-player and multiplayer gameplay modes. The prototype presented to the DiSC consortium during the meeting was a basic version of the game, developed to test its core mechanics and evaluate its functionality despite being a simple digital version with minimal graphics and placeholder assets.

Having received feedback from the project partners, Innovation Hive will begin the process of transforming the board game into a fully digitised format including the user interface, implementing game mechanics, integrating animations and sound effects, and developing AI opponents.

As part of piloting, partners will conduct extensive testing to identify and address any gameplay issues, bugs, or balance problems and gather feedback from the project target groups to ensure the game is enjoyable, engaging and achieves the required learning outcomes for senior citizens who want to improve their digital security skills and knowledge. Focus on creating an intuitive and user-friendly interface. Consider factors such as clear navigation, responsive controls, and informative feedback to enhance the overall user experience.
